Multiplication Fraction Practice

For each of the following, show and describe two ways to solve each equation.

1.) $\frac{7}{8}$ of $\frac{1}{4}$

2.) $4\frac{6}{15}$ of $\frac{2}{3}$

3.) What is the difference between 5'-6" and 5.6 feet?

Name: _____ Date: _____ Period: _____

4.) Write the improper fraction $\frac{18}{8}$ as a mixed number. Use a drawing to explain your reasoning.

5.) When multiplying fractions, will the product be smaller or larger than the multipliers? Justify your answer.
