Reflections

1

In this investigation, you began to explore linear relationships by examining the patterns of change between two variables. The following questions will help you summarize what you have learned.

Think about your answers to these questions. Discuss your ideas with other students and your teacher. Then, write a summary of your findings in your notebook.

1. Describe how the dependent variable changes as the independent variable changes in a linear relationship. Give examples.
2. How does the pattern of change for a linear relationship show up in a table, a graph, and an equation of the relationship?
